***Terminal Disclaimer***

The terminal disclaimer filed on September 16, 2005 has been reviewed and is accepted. The terminal disclaimer has been recorded with respect to U.S. Patent No. 6,694,469.

**Reasons for Allowance**

Claims 1-16 are allowable.

The following is an examiner's statement of reasons for allowance: The present invention pertains to a system and method of quick retransmission of signals in a communication system. The claimed invention (claim 1 as representative) recites such novel features as "...means for determining a quality metric of said unit of received signal; means for instructing said means for generating said feedback signal to generate said feedback signal in accordance with said quality metric; and means for preventing decoding of said unit of received signal if an indication received on a control channel indicates that said unit of received signal is not to be decoded." Each of the independent claims 1, 4, 12, and 14-16 recite similar features.

The prior arts of record (Schneider U.S. Patent No. 6,377,562 is an example of such prior arts) teach a communication system in which the data portion of the received signals represents monitored channel quality of the link. Quality metrics may comprise two components, both monitored at the subscriber premises and transported to the base station. Standard error checking detection methodology provides for generation of an Automatic Retransmission reQuest (ARQ) signal upon detection of an error. The

Art Unit: 2133

ARQ signals are metrics indicative of error detection obtained from CRC data. The probe signals are metrics, which characterize the transmission channel and frequency selectivity, e.g., signal strength. The processor provides a measure of the bit error rate, obtained from the ARQ signals, and of the wireless channel transmission quality, obtained from the probe feedback signals, to be compared against the quality of service criteria for each subscriber. ARQ signals can be transmitted back to the information provider, in conventional manner, for retransmission of data.

The prior arts, however, do not teach instructing the feedback signal generator to generate a feedback signal in accordance with said quality metric, and to prevent decoding of the signal if an indication received on a control channel indicates that the signal is not to be decoded. Hence, the prior arts of record do not anticipate nor render obvious the claimed inventions. Thus, claims 1-16 are allowable over the prior arts of record.
